

Boiler Replacement Project

# Out with the old: Boilers & plant room equipment replacement

## Out with the old: Boilers & plant room equipment replacement

### 1 CLIENT BRIEF

Due to the existing equipment nearing the end of their life, Honeywell Building Solutions asked Mercury to replace the existing Boilers and plant room equipment with new, on a like for like basis.

### 2 OUR SOLUTION

Mercury fully installed two Remeha Gas 610 Eco Pro 1000 boilers, which included welded modifications to the flow and return connections to accept the new models. The project also required a new primary pump set, Pressurisation unit, cold water booster set. Once installed, the system was fully flushed and balanced before commissioning all the plant within the plant room.

Due to complexities of the project, the majority of the works was complete outside normal working hours to cause less disruption to the end user.

### 3 PROJECT RESULT

Due to complexities of the project, we chose to complete the majority of the works outside normal working hours to cause less disruption to the building which the end user appreciated. Mercury gave extensive demonstration on the new equipment to aid the on site engineers with future maintenance. Overall, the project went well giving an extended life to the whole system.
